SNAP

A book cradle for the ScanSnap SV600 to take your scans to the next level.

Adjust width and height

The height of the cradles can be adjusted individually for the left and right page, to allow for different book thickness. Up to 8cm thick books.

The cradles can be moved laterally, independent of one another, to allow for the adjustment of the binding of the books in the middle of the book.

Glass to flatten pages

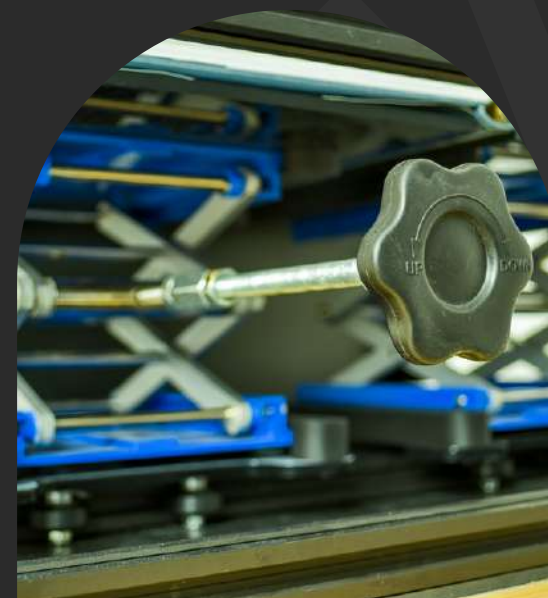

The glass moves up and down to allow the operator to flip the pages, and then flatten the same pages for the scanning process.

Both cradles are independent, one for the right page and one for the left page, so that each one sticks to the glass perfectly straight.

Solid & Easy

The device is made of industrial grade aluminum, so no book can hurt it.

It's also very easy to use. Users will require literally a couple of minutes to learn how to use the device. It's that simple.

Works with other scanners

The device will work with just about any document camera on the market which a scanning area of up to A3.
